

PWK-2W/2B Installation Instructions

OPERATION:

The PWK-2 transmitter is a portable keyring transmitter. There are 2 buttons allowing manual activation.

Pressing either of the buttons will activate the transmitter as long as the button is depressed.

TRANSMITTING KEY CODES:

The output transmission from the PWK-2 is dependent on which button is activated and how long it is held activated. Each button causes a unique key code to be transmitted when initially activated. If the button is held activated for a period of 3 seconds the key code transmitted changes to yet a different code. This format allows 4 functions to be controlled by just two buttons.

SUMMARY:

Code 1 -- Button #1 initial activation

Code 2 -- Button #2 initial activation

Code 3 -- Button #1 held on after 3 seconds

Code 4 -- Button #2 held on after 3 seconds

BATTERY LIFE: 50,000 operating seconds or 10 years.

MAINTENANCE FREE: Maintenance cannot be done on this transmitter.

The transmitter is sealed against moisture intrusion and the unit has no provision for changing batteries.
